About

Computer Science (AI & ML) undergraduate at PES University with a strong interest in Cybersecurity and Artificial Intelligence. Experienced in Linux systems, self-hosted infrastructure, containerized environments, and hands-on security research through homelabs, projects, and practical experimentation.

Highlight Projects

Active Cyber Deception

Honeypot-based cybersecurity system designed to capture and analyze attacker behavior, surface vulnerabilities and potential attack paths through a Wazuh dashboard.

- Deployed honeypot services to attract and log malicious activity
- Collected and analyzed attack telemetry from adversary interactions
- Integrates with Wazuh SIEM for visualization, alerting, and analysis
- Helps identify vulnerabilities and potential exploitation paths

Homelab

Personal self-hosted lab used to experiment with networking, system administration, and security-focused infrastructure in a controlled environment.

- Configured secure remote access to the lab environment using Tailscale VPN
- Integrated a NAS system for centralized storage and hosting self-managed services
- Deploying and experimenting with open-source infrastructure and security tools
- Exploring automation setups and terminal workflows using tmux

Telemetry Collection System

Distributed telemetry system designed to collect and analyze system data from multiple clients through a centralized monitoring server.

- Built a client-server telemetry system where multiple clients send monitoring data to a central server using UDP
- Implemented server-side telemetry collection and aggregation from distributed sources
- Added support for TLS-secured communication and packet loss monitoring for network reliability analysis
- Developing a dashboard for visualization and monitoring of telemetry data

Educational History

B.Tech – Computer Science and Engineering (AI & ML)

2024–2028

PES University

Relevant Coursework: Data Structures & Algorithms, Web Technologies, Computer Networks, Operating Systems

Technical Skills

- **Languages:** Python, C
- **Systems:** Linux, Client–Server Systems, Socket Programming
- **Infrastructure:** Self-Hosting, Containerization, Homelab Management
- **Security:** Honeypots, Security Labs, Private Networks

Certifications

- Computer Networks and Internet Protocol - NPTEL
- HackerRank skill certification test for Python

Languages

Fluency in **English, Hindi, Kannada & Marathi**
